Maximum Marks	3 Marks

Project Executable Files

This section requires submission of all executable and deployable files for your project. Ensure all files are properly organized, named, and uploaded to the specified submission platform. The evaluator must be able to run or deploy your solution using the provided files and instructions.

Step 1: Submission Checklist

S.No	Item to Submit	Submitted (Yes / No / NA)
1	Complete source code (all files and folders)	Yes
2	README / Setup Guide (instructions to run the project)	Yes
3	requirements.txt / package.json / dependency file	Yes
4	Database schema / seed files (if applicable)	NA
5	Environment configuration file (.env.example or similar)	Yes
6	Deployed application URL (if hosted)	Yes
7	APK / Executable binary (if applicable for mobile/desktop apps)	NA
8	Dockerfile / Containerization config (if applicable)	No
9	Test files and test results	Yes
10	Demo video or walkthrough (if required)	Yes

Step 2: File / Folder Structure

Provide an overview of your project's file and folder structure below:

```

/emotion-detection-engine
/models    - Saved BERT and BiLSTM model files
/data      - Training and processed emotion datasets (CSV)
/utls      - Text preprocessing and helper functions
/services  - Emotion detection, model comparison, Gemini AI guidance modules
/history   - Session history and analytics CSV storage
app.py     - Main Streamlit application
requirements.txt - Python dependencies
README.md  - Setup and run instructions
  
```

Step 3: Deployment / Access Details

Field	Details
Hosted / Deployed URL	
Login Credentials (Demo)	<i>[Provide demo username and password for evaluator access]</i>
Platform / Hosting Provider	<i>[e.g., Streamlit Community Cloud, Render, AWS, Azure]</i>
Repository Link	
Demo Video Link	

Step 4: Run Instructions

Provide clear, step-by-step instructions for the evaluator to run your project locally:

Pre-requisites:

Python 3.9+, pip, and a Google Gemini API key

Step 1: Clone the repository: `git clone <repository-url>`

Step 2: Install dependencies: `pip install -r requirements.txt`

Step 3: Configure environment: copy `.env.example` to `.env` and add your Gemini API key

Step 4: Ensure the trained BERT and BiLSTM model files are present in `/models`

Step 5: Start the application: `streamlit run app.py`

Step 6: Open the browser at `http://localhost:8501`

Step 5: Known Issues / Limitations

S.No	Known Issue / Limitation	Workaround / Status
1	Currently supports English text only.	Multilingual emotion detection is planned for a future version.
2	No user authentication in the current version.	Planned for future releases with Student and Teacher roles.
3	Requires the trained model files to be set up manually before the first run.	Setup steps are documented in the README / Setup Guide.
